

ABSTRACT

A microwave oven incorporating a toaster includes a toaster door provided on a toaster panel for opening and closing at least one toaster entrance and a tray assembly. The tray assembly includes a tray support inside the toaster and at least one tray which is fastened to a top of the tray support for holding a food item. The tray includes at least one elevating bracket for maintaining a predetermined distance between the tray and the tray support. In addition, the tray assembly further includes a support wall provided at a front end of the tray for supporting a front lower portion of the food item so as to stably position the food item at an optimal location for toasting. In the microwave oven incorporating a toaster, each food item is positioned against a heater included therein so as to maximize the toasting performance of the toaster. Also the tray and the tray support can be easily disassembled and assembled for the purpose of cleaning and replacing with a new tray.
